METHODOLOGY

Echelon Insights conducted a survey on behalf of the National Parents Union to understand K-12 parents' views on current topics. This survey was fielded online from May 28 – June 1, 2026 in English among a sample of 1,527 parents of public school students in grades kindergarten through 12th grade nationwide using non-probability sampling.

The sample was drawn from the Cint/Lucid sample exchange based on gender, age, race/ethnicity, and education quota targets for parents of public school students derived from the National Center for Education Statistics (NCES) American Community Survey - Education Tabulation, a tabulation of 5-year data from the US Census Bureau's American Community Survey.

Measures taken to ensure data quality included measures to prevent duplicate responses, questions designed to disqualify inattentive respondents, and the removal of respondents from the data file who answered more than one-third of the questions they were asked in less than one-third of the median response time per question.

The sample was weighted to population benchmarks for parents of public school students derived from the American Community Survey - Education Tabulation on gender, age, race/ethnicity, education, and region, as well as on the following interactions derived from American Community Survey data on parents of school-age children: gender by education (college / non-college), gender by race (white / non-white), and race (white / non-white) by education (college / non-college). The sample was also weighted on gender among those who self-identified as registered voters to reflect benchmark data on voter registration among parents of school-age children from the US Census Bureau's November 2024 Current Population Survey Voting and Registration Supplement.

Calculated as it would be for a random sample and adjusted to incorporate the effect of weighting, the margin of sampling error is ± 2.7 percentage points. This estimate of precision does not account for other potential sources of error that can occur in online surveys with non-probability samples, such as non-coverage due to the survey being conducted online.
